Senior Software Engineer

Founding engineer building end-to-end products with React, Next.js, Node.js, and PostgreSQL. Integrated GPT-4V into a mobile nutrition product, built authentication and cloud image pipelines, and developed modular SDKs and automated deployment systems.

TECHNICAL SKILLS

TypeScript, JavaScript, Node.js, Next.js, React, AWS Lambda, Docker, Git, PostgreSQL, MongoDB, Redis, Prisma, Electron, Vercel

PROFESSIONAL EXPERIENCE

Burn | Founding Engineer | Oct 2022 - Present

- Built a cross-platform iOS/Android nutrition app with React Native and Expo, backed by Next.js and PostgreSQL.
- Integrated GPT-4V to analyze meal photos and extract calories, macronutrients, and health scores automatically.
- Built passwordless authentication with Google and Apple OAuth sign-in and JWT-based persistence.
- Designed an image-processing pipeline with compression and cloud storage using Vercel Blob.

Nifty's | Founding Engineer | May 2021 - Oct 2022

- Automated contract deployment and verification on Ethereum and Palm; established staging and mainnet environments for testing and releases.

Hypernet Labs | Founding Engineer | Feb 2019 - Feb 2020

- Designed a modular protocol SDK using dependency injection to support testing across layers, services, and business logic.
- Established CI/CD pipelines for continuous testing and deployment; managed a small engineering team, technical roadmaps, and career development.

i2Chain | Founding Engineer | Sep 2018 - Feb 2019

- Built a cross-platform Electron desktop application using React, Redux, JavaScript, HTML, and CSS.
- Implemented identity-based access control in Node.js to securely share information across domains.

Blockchain Consultant | Sep 2017 - Sep 2018

- Architected, developed, and launched Solidity settlement contracts handling hundreds of millions in value.

Weebly | Software Engineering Intern | Jun 2015 - Sep 2015

- Built a metaprogramming algorithm that analyzed API server code and generated client libraries in 13 languages; implemented App Center / Carbon REST API endpoints and automated sanity checks.

EDUCATION

University of California, Davis | B.S. Computer Science | Jun 2017
